Service manual

3 Maintenance

3.1 Cleaning

Parts that touch the product are cleaned every day with a food-safe detergent and rinsed with drinking water. The outer surfaces are wiped once a week.

3.2 Sensors

Temperature, pressure, flow and level sensors are checked every month against a reference. The parts list names the single sensors.

3.3 Lighting

All stations have LED lamps. The work lights are dimmable, and each station has a warning beacon with its own battery.
